Post-Processing

Be aware that the execution of post-processing command will prevent the user interface from being accessible until completion, when downloading subtitles in interactive mode (meaning you'll see a loader during post-processing).

Use Post-Processing

Analytics

Enable

Send anonymous usage information, nothing that can identify you. This includes information on which providers you use, what languages you search for, Bazarr, Python, Sonarr, Radarr and what OS version you are using. We will use this information to prioritize features and bug fixes. Please, keep this enabled as this is the only way we have to better understand how you use Bazarr.
